1 Tab Player Panel

1.1 Overview of Tab Panel

1.	Drag MIDI to Host
2.	Time Humanization
3.	Velocity Humanization
4.	Select a track
5.	Load a Tab
6.	Reload the Tab
7.	Go to…
8.	Play
9.	Loop
10.	Host Playback Sync
11.	BPM Sync
12.	Convert Tab to Riffer
13.	Convert Current Measure to Strummer
14.	Velocity Proportion
15.	Strum Time Proportion
16.	Fixed by Strummer

1.2 Load a Tab

Ample Guitar supports GP3, GP4, GP5, GPX, and GP formats. After editing a tab, simply click Refresh—there is no need to reload the file. Click the edges of the tab display or use the

navigation buttons to browse through the tab.

1.3 Tab Play

Click the play button to play a tab. If loop toggle is on, tab will start over again when it reaches end, otherwise the tab will stop.

1.4 Drag MIDI to Host

Drag export button to export a tab to host as midi file.

1.5 Host Playback Sync

When enabled, Ample Guitar follows the host playback. Please ensure that the time signature of the host matches the tab.

1.6 Time Humanization

The timing of tab is randomized during playback to avoid robotic performance.

1.7 Velocity Humanization

Humanization applies random change to velocity during playback.

1.8 Velocity Proportion

Adjust velocity of all notes by proportion.

1.9 Strum Time Proportion & Fixed by Strummer

Adjust strum time by proportion. If Fixed by Strummer is turned on, the strum time set in Strummer is used instead.

1.10 Convert Tab to Riffer

In Tab Reader v4, Guitar Pro scores can be converted into Riffer with full compatibility for fingering positions, articulations, and note expressions from the notation.

1.11 Convert Current Measure to Strummer

Converts the current measure of the tab into a Strummer rhythm pattern.
